1. Organization Overview

(OpenAi.2026)

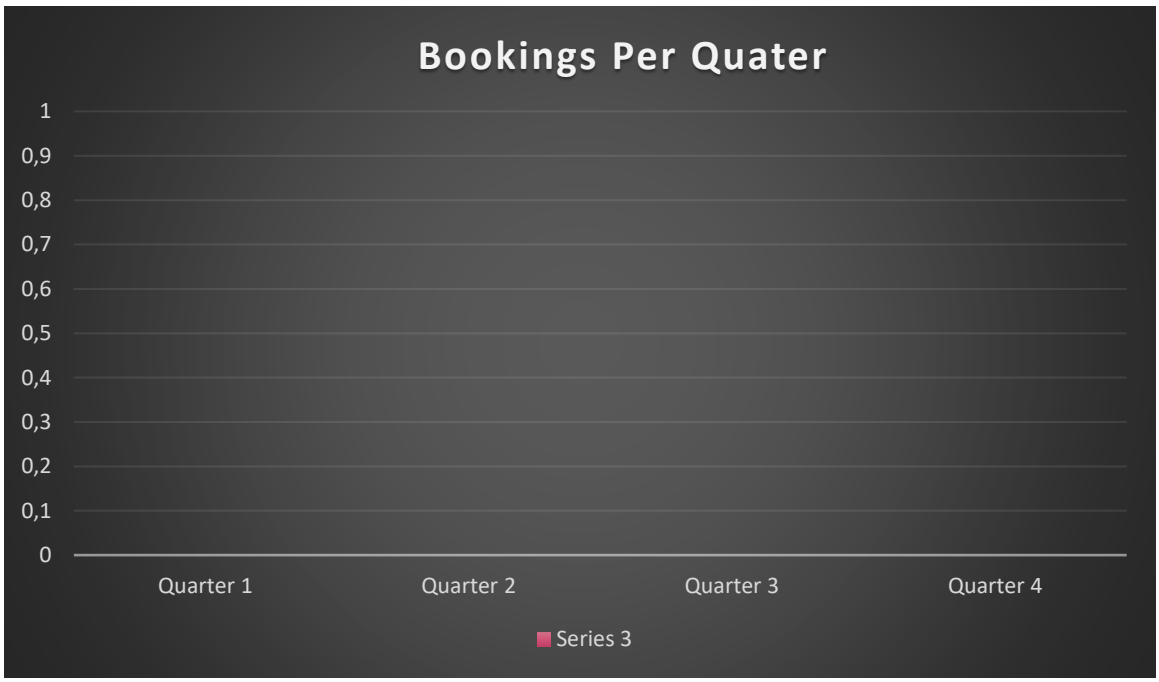
Lekker Lens Photography is My personal free lance photography business. It started out in 2022 as a mere passion and homed in on the skill to the point where I started taking on small time gigs for personal friends and family members at big functions like weddings etc. It has now come to the point through word of mouth that my hobby has turned into a small business where I get regular bookings/ photography sessions. My target audience is wide including big functions like weddings, Matric balls, Dances and even personal modelling. My vision with this is to grow my hobby into a full-time job, where I can capture beautiful moments in life to be remembered forever.

2. Website Goals and Objectives

The objective of this website is to generate more attraction and eyes on my skills and services. Prior to this in the works website the only form of advertisement I worked with was word of mouth and that can only get you so far, with this in mind the main objective of this website is spread the word and be a vital tool in this businesses growth while also offering up valid and trustworthy way of getting in touch with me via the website to book and contact Lekker Lens photography for more info.

To measure the success of this website we will be using 3 main indicators

1. Booking count (The amount I get booked per month on average) which will be tracked by physically counting enquiries/ sessions per month and will be comparing this monthly upon the launch of the website.



2. Customer satisfaction (Reviews and 1 out of 5 rating system). We will be collecting testimonials and asking for reviews and feedback (Pros and Cons) and gather feedback that way to improve the success of the business. To complete these reviews, we will have a very simple form on the website that allows customers to get back to us.

3. Website traffic. Website traffic referring to the amount of engagement we receive on the website, new and old customers returning to the page and interacting with our website whether it be scrolling through photos. To track this, we will be using google analytics by tracking number of users, page views and new vs returning viewers.

3. Current website Analysis (if applicable)

N/A. Website is currently in the process of being created therefore no analysis is applicable.

4. Proposed Website Features and Functionality

The outline of this website contains a main web page which will be considered the home page which will have 4-5 navigational links that will direct the user of the page to whatever they are looking for including: “services”, “about us”, “contact page”, “home page”, “reviews”. Each page will be detailed and showcase what the customer needs. The services page will showcase all the available packages with guided photos to show previous examples, the about us page will state our mission and vision for this page detailing my passion for photography, the contact page will how the customers get in contact with us to decide which package they want and discuss possible dates via email.

5. Design and User Experience

- Color scheme: we will be using 3 colors that represent the local fun aspect of the business being Teal as it represents the beautiful oceans of cape town, Sunset orange giving a warm and comfortable feeling and golden yellow for positivity. (KEIM, n.d.)

(openAi.2026)

- Typography will have a clear hierarchy for clear reading and will be using sans-serif fonts as it is a modern and easy to read font with bold heading, so it is clear and understandable. (Wikipedia, n.d.)
- The layout/ design of the website will be clear and easy to read as well as to navigate. It will not be an overcomplicated design but will incorporate photos for more information to promote and see firsthand. (Pumpkin Web Design, n.d.)
- For user experience conditions it is a mobile friendly website, good contrasting color that makes it easy to read and fast loading.
- Low wire frame: This illustrated image shows the basic layout of the simple image that will be used to display the home page of the website

(OpenAi.2026)

6. Technical Requirements

The Lekker Lens Photography website requires suitable, modern technology to ensure that the website's functionality is top notch such as HTML and CSS + for extra styling and modifications. It will need an appropriate domain name that is instantly recognizable and memorable, such as "www.LekkerLensPhotograghy.org" . Further down the line, the use of Java script may be implemented to add certain dynamic features and interactivity to the website. (Orbit Media Studios, n.d.)

All these tools should suffice and meet the necessary technical requirements of websites to satisfy customer needs such as engagement.

7. Timeline and Milestones

A clear Milestone guideline for this project follows as such:

1. Completion of planning including necessary research into what it takes to make a website, what it means to create a functional and aesthetically pleasing website which still meets the requirements necessary for the modern organization to meet customer engagement needs. (WEEK 1)

2. After Proposal approval, after completing the proposal with sufficient research and effort to submit it for appraisal in hopes that it meets whatever criteria is needed for a passing grade. (WEEK 2)

3. Development completion which involves using tools such as visual studio to code the website on additional tools like html, CSS to design and make a functional website (WEEK 2-3)

4. Testing/ Submitting final folder containing all the tools used to create this formative part 1 which includes the images, graphs and files that have been used.

8. Budget

he estimated budget for the development process plus the maintenance on this website is estimated to be between R8000-R15 000 with an extra R200-R300 for the rights to the domain name which we have opted for. The web hosting services which is basically what provides the server space and necessary technology to make said website accessible online should be about an extra R100-R200 depending on the used package, however content updates and certain minor technical support will charge about R2000-R5000 per year meaning that for the first year we will be looking at +- R22 000 -R25 000 in total. (New perspective Studio,n.d)
